

Prepare your shutdown period with Alfa Laval Compabloc services

Take proactive action to minimize the risk of shutdown-related issues and energy losses. By keeping an eye on your Compablocs and servicing them regularly, you can address issues and potential problems before they escalate.

Follow your operating parameters, and plan for service when you notice any of the following:

- Insufficient heating or cooling performance
- Increased pressure drop
- Higher energy consumption in pumps
- Changes in flow rates, pressure drop, temperature
- External leaks
- Unusual media content identified during sample analysis (impact on product quality)

At Alfa Laval, we can support you as a trusted partner during your next shutdown period.

We offer a comprehensive range of services to ensure your equipment's operational reliability:

- Site audit
- Performance diagnosis/assessment
- Condition assessment
- Reconditioning
- Cleaning services
- Block exchange
- Redesign
- Spare part recommendations
